Times have changed,  
but the Verney-Carron spirit remains the same...

Claude Verney in 1820

In 1820, our ancestor 20-year-old Claude Verney was already the worthy heir to a long line of gun makers when he entered the prestigious gunmaking competition in the town of Saint-Etienne, the capital of French gunmaking. He won the competition, and was able to launch his company in his own name. Ten years later he married Antoinette Carron, who was herself the daughter and granddaughter of gun makers, and thus the name Verney-Carron came to enter the history of French gunmaking.

1820

A family album was born... an album whose pages we continue to turn, marking the company with the same spirit and values championed by our ancestor. Values that include ethical business practice, the art of a job well done, ingenuity and research, and traditional craftsmanship applied to semi-industrial production.

2015

When you buy a gun made by Verney-Carron, you enter into 195 years of history, history that is continually renewed, built of innovations, adaptation to the latest fashions and technologies, and spectacular successes... A history that is ongoing, thanks to the loyalty of our hunting customers, but also thanks to the loyalty of our staff, who place all their skill and expertise at the service of Verney-Carron from design through to every stage of production.

## Handcraft and industry

Because a hunter must have absolute confidence in his gun, for 195 years we have made it a point of honor to lavish particular care on every single stage in the manufacture of our shotguns and rifles, care derived from a family and human tradition that today makes Verney-Carron the French leader in its market.

Because you need a good barrel to make a good gun, we have developed a manufacturing process using tubes of high-resistance steel enabling us to obtain barrels that are fine, light, accurate and extremely tough. Barrels that are aligned, assembled, and manually adjusted by our qualified staff.

Thanks to the longevity of our know-how, we have been awarded the Living Heritage Company (EPV) label, a genuine mark of recognition by the State for the excellence of our traditional craft and industrial know-how. These barrels are also the fruit of modern technology, of computer aided design (CAD), directly linked to digitally controlled CNC lathes. Because continual innovation is a necessity, we have an in-house R&D office devoted to creating new products that we regularly offer to our hunter customers, as well as improving and developing the existing ranges that give the brand its success. Because the men and women who work at our

Craftman in 1950

Assembly of barrels before welding in 2014

company often spend their entire working careers with us, because sometimes they are even following a parent into the company, they can rely in their daily working lives both on traditional craft mastery and on modern, cutting edge industrial know-how, thus ensuring that all the weapons built in our workshops share the same exceptional high quality and unparalleled ease and practicality of use.

Today, proud inheritors of this family know-how, we aspire to preserve and continue this philosophy and spirit that have animated the company for 195 years.
