BREVETÉ  
SYSTÈME TECHNIQUE

The système Technique Anti Rebond (Technical System Anti Rebound) by Verney-Carron lock the bolt at the time of its closing. This makes it possible to have a much broader adjustment of gas and a systematic and frank closing without risk of rebound. The system operates with all types of cartridges and all bullet weights, whatever the shooter's height or aiming habits

Limited numbered edition.

**YOU WILL LIKE**

• A very practical forward folding magazine. This clever device makes loading and ejection easy and practical.

Advantage : shoulders limits the risk of the points of some shots being deformed by the inertial forward projection of the ammunition by the recoil effect.

• A removable 2 and 4 round magazine is also available.

**SAFETY BONUS**  
The green spring loaded magazine base plate enables you to see at a glance that your gun is unloaded.
